THE CHALLENGE

As an academic health system grew they faced a common challenge: the more patients they treated, the more documentation had to be done. Their providers were stuck spending hours filling out patient records instead of practicing at the top of their licenses. That's where ScribeAmerica's expertise made the difference.

THE SOLUTION

The health system began piloting scribe solutions with 10 providers, quickly expanding to more than 100. After improving RVUs, they continued to grow their scribing program with ScribeAmerica. Both in-person scribes and remote telecribes were leveraged to improve documentation, resulting in a 66% decrease in provider time spent on documentation.
